

Company profile

Ingredients considered with the formulation, the evidence and the supply plan in view.

PREVIEW STATUS - This is a proposed Nerivanta presentation, not a verified statement of manufacturing capability, product availability or company qualifications.

A formulation-led brief

Nerivanta's proposed presentation brings marine and algal ingredient categories into one project conversation. The starting point is the intended application: composition, molecular form, sensory requirements, market and supporting evidence.

A useful brief connects those requirements before a sample or commercial offer is agreed. The information below sets out that conversation; approval of the underlying company and product details is still required.

Four areas of focus

Category	Project discussion	Evidence to confirm
Nutrition	Fish-oil concentrates and algal DHA for formulation assessment.	Composition, form, oxidation limits and analytical methods.
API	Technical assessment of EPA/DHA specifications for qualified projects.	Product identity, site, regulatory file scope and market suitability.
Animal nutrition	Oil and blend concepts for feed, pet and aquaculture applications.	Fatty-acid profile, freshness, intended use and handling requirements.
Softgel OEM	An outline for formula, capsule and packaging development.	Fill specification, stability work and finished-product release criteria.

The teams involved

Purchasing defines volume and delivery needs. Formulation teams define performance. Quality and regulatory reviewers define the evidence required. Brand teams align the finished format and presentation.

From brief to review

A proposed project sequence, with an approval point at each stage.

Stage	Inputs	Review outcome
01 / Define	Application, target composition, dosage format and destination market.	A written brief with product and market boundaries.
02 / Qualify	Document requirements, specification and analytical acceptance criteria.	A confirmed list of evidence needed before proceeding.
03 / Evaluate	Sample plan, packaging, test methods and evaluation timetable.	An assessment against the agreed specification.
04 / Plan	Forecast volume, delivery timing, storage and shipment requirements.	A supply proposal subject to approval and commercial agreement.

Company and contact details

The website currently contains placeholder company and contact fields. They have deliberately been excluded from this review copy.

Field	Release status
Registered company	Pending confirmation by the brand owner
Business address	Pending confirmation by the brand owner
Business email and telephone	Pending confirmation by the brand owner
Public website	Final domain not yet confirmed

BEFORE RELEASE - Confirm legal identity, contact information, approved products, manufacturing roles and any supporting credentials. This draft does not establish those facts.
